The RNF144A-AS1 FISH probe is designed to hybridize to the RNF144A-AS1 gene on 2p25.1 and is primarily used for detecting amplifications and deletions associated with the gene. This probe is FISH confirmed on normal peripheral blood metaphase spreads and interphase nuclei. The probe can be labeled in one of five colors, using standard Nick Translation protocols. Each probe is sold in a 20 test kit (approximately 20 slides $-22 \times 22 \mathrm{~mm}$ area) and includes hybridization buffer. Please also note that due to design optimizations, prices are subject to change.

## RNF144A-AS1 FISH Probe (2p25.1)
